

CHRISTIAN RAPPA

Staff Software Engineer

📍 Austin, Texas, United States rappacontact@gmail.com

Profile

Staff software engineer with 9+ years building and scaling customer-facing web platforms, driving architecture, security, and product strategy across distributed teams of up to 15 engineers. Delivered secure, high-availability healthcare and developer-tooling systems—including contributions that supported a \$1B company acquisition—by leading frontend and cloud initiatives using React, TypeScript, Next.js, Node.js, AWS/Azure, Vercel, and AI/API integrations. Skilled at aligning engineering execution with product goals, improving reliability, and mentoring teams to ship mission-critical systems.

EXPERIENCE

2022 — Apr 2026

Staff Software Engineer at Elevance Health

I have led technical direction for teams across many different platforms consisting of engineers, designers, and business management personnel to create effective healthcare management platforms for doctors to easily and safely manage their patient's health and prescriptions. I led technical architecture decision making for our offshore teams with regard to software testing, security, container configurations, frontend framework, and internal API systems.

2025

Senior Software Engineer at Launch Darkly

Worked across multiple teams and features delivering critical user focused deliverables that empowered users to release code to production with the highest level of safety using our Release Guardian platform. Spearheaded frontend development of Highlight monitoring acquisition for implementation into release guardian workflow for users to understand exactly where performance bottlenecks and errors were happening in their deployments.

2018 — 2022

Senior Frontend Engineer at Bioplus Specialty Pharmacy

I was integral in the teams behind both of our Enterprise software platforms, one with a massive variety of medical micro-services spanning the entire organization and the other built on the most modern technologies to serve our patients directly. My work contributed to the sale of our company to Elevance Health to the tune of \$1 billion. Here I made high impact decisions on system architecture when we were fleshing out new micro-services and implementing new technologies.

Skills

Material UI / Tailwind

AWS Bedrock / AI APIs

Product Management

Typescript

Launch Darkly

Azure / AWS Cloud

Next.js / React / Angular

Node.js / Java

Vercel / Github Actions

Vanilla JS / HTML / CSS

Redux Toolkit /
React-Query

Jest / VITest / React
Testing Library

REST / GraphQL / Apollo

Figma / Photoshop

SCRUM / Agile

Feb 2017 — Oct 2018

Software Engineer at VMware

Developed software applications for use on the battlefield forts in an effort to systematize munitions storage that resulted in eliminating casualties from improper storage procedures in the combat theater. Also consulted Wells Fargo Software teams to improve their performance and availability to their massive customer base.
