INTRO

As a versatile Frontend Engineer with proven leadership experience, I combine technical expertise in modern web technologies with strong cross-functional team management skills. I excel at bridging the gap between technical implementation and business objectives having successfully led distributed teams across countries and departments to deliver impactful software solutions. Whether architecting scalable frontend solutions or driving product vision, I bring a unique blend of technical proficiency and collaborative leadership to every project.

EXPERIENCE

Software Engineer - Launch Darkly — Contract — 2025

Worked across multiple teams and features delivering critical user focused deliverables that empowered users to release code to production with our Release Guardian platform in a safe manner that included real-time monitoring & reporting. Spearheaded frontend development of Highlight monitoring acquisition for implementation into release guardian workflow.

Lead Senior Frontend Engineer - Elevance Health — 2022 - 2025

I have led teams of up to 15 different engineers, designers, and business management roles to create effective healthcare management platforms for doctors to easily manage their patient's health and prescriptions. I have also been responsible for managing our offshore engineering team to be effective additions in our processes.

Senior Frontend Engineer - Bioplus Specialty Pharmacy — 2018 - 2022

I was integral in the teams behind both of our Enterprise software platforms, one with a massive variety of medical micro services spanning the entire organization and the other built on the most modern technologies to serve our patients directly. My work contributed to the sale of our company to Elevance Health to the tune of \$1 billion.

Software Engineer - VMware — Feb 2017 - Oct 2018

Although a temporary 9 month contract, I was a large part in creating software applications for use on the battlefield forts in an effort to systemize munitions storage that resulted in eliminating casualties from improper storage procedures in the combat theater.

EDUCATION

Southern Oregon University — Computer Science, 2014
